Report to CABINET

Procurement of Waste Collection Receptacles

Portfolio Holder:
Cllr Chris Goodwin – Cabinet Member for Don't Trash Oldham

Officer Contact: Nasir Dad – Director Environment

Report Author: Ben Parsons – Operations & Development Manager.
Ext. 2144.

24th March 2025

Reason for Decision

Cabinet approval is required to enable the Waste Team to procure and contract for the provision of various domestic and non-domestic waste collection receptacles to replace existing life cycle expired waste collection receptacles, lost and damaged receptacles, to supply new receptacles to new dwellings and businesses as well as to repair and service the goods for a total term of 6 years duration.

Executive Summary

The Council is a duty holder in connection with the Environmental Protection Act 1990, as updated by the Environment Act 2021. The provision of domestic and non-domestic waste collection is statutory obligation under the legislation. In order to fulfil its duty, the Council must procure an adequate supply of waste collection receptacles to cater for the volumes and types of waste generated by businesses and households, and the Council must be able to maintain satisfactory stocks of waste collection receptacles as shall enable the Council to respond quickly to operational needs.

The Council's duties and obligations are ongoing and the continual depletion of its stock of replacement waste collection receptacles means that the Waste Team needs a quick, effective and compliant route to market to ensure the replenishment supply arrangements are satisfactory.

Recommendations

Cabinet is recommended to:

1. Approve the Procurement Strategy under Option 1
2. Delegate authority to the Director of Environment in consultation with the Cabinet Member for Don't Trash Oldham, the Director of Finance, the Borough Solicitor and the Head of the Commercial Procurement Unit or each of their nominees to approve all expenditure linked to Option 1 and to implement the Procurement Strategy under Option 1, to agree and implement the specific commissioning arrangements for each of the requirements under Option 1 and to award and enter into contracts with the preferred suppliers identified in accordance with Contract Procedure Rules.
3. Delegate authority to the Borough Solicitor or their nominee to carry out all legal formalities associated with Option 1, including the execution of all contracts.

Waste Collection Receptacle Procurement Strategy Report

1 Background

1.1 The Environmental Protection Act 1990 provides the Council with a duty to collect refuse and recycling separately; the Council can specify number, size, type, colour, etc and whether to provide collection receptacles (free, at a reasonable charge, or at all). The Council currently choses to specify, provide, and exercise its power to charge for some of the receptacles supplied for domestic use and for business waste collections indirectly via service charges.

1.2 Therefore, the Waste Service regularly purchases waste collection receptacles, spares, and services for their refurbishment, to exchange lost and damaged containers as well as provision to new domestic properties, or for additional non-domestic premises, such as businesses.

1.3 The average annual spend over the last four years is circa £250k. The demand fluctuates across the year and is not readily predictable, while supply lead times are especially volatile, which means the service needs to be able to dynamically order stock and responsibly alter suppliers when required. It is the norm for local authorities to require the replacement of anything up to ten percent of its stock per annum for day-to-day replacements.

1.4 Thus, subsequent to the much earlier decisions made by the Council about the waste collection systems and methodologies to be used by the service there is now little choice or discretion in the spend, apart from that of effective procurement process and supplier management.

1.5 The only alternatives available to the Council to negate the requirement to purchase waste receptacles and incur the associated spend, as is current practice, would be to either:

- demand that residents purchase or provide their own receptacles according to a choice set out by the Council; however, the Council would then be liable for damages and losses that do occur during emptying, thus still not truly eliminating the Council's responsibilities, or
- change the method of collection to disposable containers; however, besides causing an increase in litter, this option is not considered by the report author to be viable as the dry recycling (blue and brown bin) materials must be collected loose in order to be processed, and the Council is legally required to collect such materials separately for recycling.

1.6 The most notable issues regarding the option for residents supplying their own receptacles would include lots of additional hidden costs for example as follows:

- The health & Safety implications caused by moving and lifting potentially increasingly damaged containers, as this would be the service users' responsibility,
- Little ability to control the number of containers presented for collection, increasing waste disposal and even collection costs,
- It is anticipated that recycling rates would decrease, further increasing, costs and potential penalties for missing recycling targets,
- There would be increased challenges for any visually impaired collections staff, especially any that are colour blind as the bewildering array of various shades of the same colour containers would almost certainly cause either missed collections, or contamination of collected material due to miss identification bins (at a cost of £1,500 per rejected load),

- Loss of business waste customers and the resultant surplus, as private providers all provide bins and there is a notable cost to purchasing individual large containers.

1.7 The costs associated with the above are likely to exceed the approximate £250k annual spend on receptacles. It is, therefore, proposed that it would be more beneficial for the Council to regularly and effectively purchase receptacles (together with spares and servicing) in order to achieve best value and to be in a position to provide the full range of receptacles and containers required by residents and businesses.

1.8 The performance of different products and the consumption of the containers is monitored by the service. The performance of suppliers' products does vary and changing suppliers, as a rule, can reduce the risk exposure to the Council, for example by reducing the need to replace significant percentages of stock prematurely due to an inherent manufacturing or design flaw.

2 Current Position

2.1 A report (Supply of Plastic Waste Containers (NC-05-20)) was taken to Cabinet in August 2020 seeking approval to award a 4-year procurement and legally compliant contract for the ongoing supply of plastic waste containers. The pricing was renegotiated twice under the contract, part way through the term, without comparative pricing due to changing commodity prices. This contract has now expired.

2.2 The approach taken to the procurement of receptacles under the now expired contract left the service without the ability to review options, including being able to take advantage of innovations from other suppliers, and it potentially meant the Council ended up paying for pre-loaded supplier risk cost.

2.3 Below is a summary of the average spend for core items over the last four financial years:

Year and Container Category	Sum of Amount	
2021/22	**£**	**280,531**
Plastic Sacks	£	14,663
Plastic Wheeled Bins	£	215,872
Metal Wheeled Bins	£	49,996
2022/23	**£**	**312,292**
Plastic Sacks	£	13,385
Plastic Wheeled Bins	£	223,828
Metal Wheeled Bins	£	75,079
2023/24	**£**	**187,174**
Plastic Wheeled Bins	£	151,224
Metal Wheeled Bins	£	35,950
2024/25	**£**	**198,427**
Plastic Sacks	£	3,332
Plastic Wheeled Bins	£	154,617
Metal Wheeled Bins	£	40,478
Grand Total	**£**	**978,424**

2.4 This report seeks Cabinet approval in respect of the following outlined procurement strategy for the provision of waste (refuse & recycling) collection receptacles (sacks, caddies, boxes, wheeled bins), spare parts and services for repair and refurbishment, over a 6-year term.

2.5 The strategy is intended to cover any current, similar, or equivalent receptacles (please see attached appendix 1 of current and likely to use receptacles) in terms of volume, nature, currently used collection systems and methods of waste collection for both domestic and non-domestic premises, including businesses. The strategy does not support the purchase of any receptacles that are required to substantively alter the method of collection operations e.g. Underground Waste Systems.

2.6 The purchase of waste collection receptacles, spares, services for their refurbishment amounts to significant and regular expenditure for the Waste Service. It is, however, a market that generally has an extremely limited number of suppliers, in part due to the minimal opportunity of product variation, for example for the large steel four wheeled containers there is currently only two possible suppliers, while for other particular products there is only one supplier.

2.7 Further, it is also a market where pricing is relatively volatile and based around the commodity pricing of crude oil for plastic, international steel prices for metal, and transportation costs. Therefore, regular shorter-term checks on prices would be beneficial because otherwise the suppliers generally account for the additional risk in their pricing, thus increasing costs. It is also these marketplace characteristics that render purchasing under a compliant Framework Agreement beneficial in many cases (but not all).

2.8 Therefore, it is proposed that, wherever possible, purchases of required stock and servicing will be made under one or more valid Framework Agreement, either via direct contract awards or via further competition (depending upon the quantities of the item required and number of suppliers). A direct contract award will only be made if the Framework Agreement identified allows for it and there is a reasonable justification for making a direct award, for example where there is only 1 available supplier or due to the unsuitability of any further competition process.

2.9 It will not always be appropriate to create lots for each set of requirements and to purchase all stock and servicing under a valid Framework Agreement. Therefore, flexibility is required to review the requirements and determine if they should be grouped into lots or if some of the requirements must be treated separately and subject to a standalone contract.

2.10 The above procurement approach would enable more frequent (circa 18 month) competitive pricing reviews between differing suppliers following a further competition or direct award under viable and compliant Framework Agreements (for the most commonly used and highest current expenditure items, namely domestic 240l plastic wheeled bins of all colours) but it would also build in the following routes, subject to spend and suitability:

- The request of three quotes in accordance with Contract Procedure Rules (CPRs) when applicable (plastic sack manufacture),
- A request for an exemption under rule 21 of the CPRs to rule 4 of the CPRs where the value of the requirement is below the financial threshold under the Procurement Act 2023 and there are exceptional circumstances which objectively justify the approval of an exemption (for example, when there is only one supplier for a specialist product such as spherical bottomed wheeled bins and caddies, used for food waste collection and metal bin refurbishments). Subject to the approval of an exemption, a decision on the spend and the proposed direct contract(s) award can then be made.

2.11 The proposed procurement strategy permits a regular review of each supply option against compliance with procurement rules and value for money obligations.

3 **Options/Alternatives**

3.1 **Option 1**-

- Agree a 6-year procurement strategy in consultation with the Commercial Procurement Unit. At the date of this report, it is anticipated that the strategy will be based on the below; however, the final strategy may vary from the following. The final strategy will be submitted for approval under a Delegated Decision Report:
    - Undertake a mini competition exercise for the procurement of the supply of domestic 240l wheeled bins of all colours circa every 18 months over the 6-year period under either a procurement compliant third-party Framework Agreement existing at the date of this report or under a procurement compliant third-party Framework Agreement put in place after the date of this report.
    - Commission lower consumption plastic business waste bins, specialist sizes of domestic wheeled bins (only one or two known suppliers for the specialist plastic bins) and metal wheeled bin requirements (again only two known UK suppliers) periodically over a 6-year term by way of mini competition or direct award under an existing procurement compliant third-party Framework Agreement or through a procurement compliant third-party Framework Agreement put in place after the date of this report or by some other method in accordance with rule 4 of the CPRs.
    - Commission plastic sacks periodically over a 6-year term by way of mini competition or direct award under an existing procurement compliant third-party Framework Agreement or through a procurement compliant third-party Framework Agreement put in place after the date of this report or by some other method in accordance with rule 4 of the CPRs.
    - Seek an exemption to rule 4 of the CPRs in accordance with rule 21 of the CPRs (currently there is a sole supplier) and then seek approval to directly award a 3-year contract or Framework Agreement under which the Council could periodically place orders for spherical bottomed wheeled bins and caddies, used for food waste collection and metal bin refurbishments with a single supplier. For the second 3-year period, a request will be made under a DDR for approval of the most appropriate way in which to secure the supply spherical bottomed wheeled bins and caddies.

Benefits

This option will allow for more frequent (circa 18 month) competitive pricing reviews between differing suppliers available under existing third-party Framework Agreements and it will enable the Council to take advantage of economies of scale.

Further each element of this option would be procurement compliant and it would enable effective pricing, service flexibility, reliable supply chain, effective decision scrutiny, without disproportionate officer time. Previous arrangements have led to large quantities of stock being ordered that have become damaged while stood in the yard due to the length of time before being required.

3.2 **Option 2**-

- Agree a 4-year procurement strategy in consultation with the Commercial Procurement Unit. At the date of this report, it is anticipated that the strategy will be based on the below; however, the final strategy may vary from the following. The final strategy will be submitted for approval under a Delegated Decision Report:
    - Procure a multi supplier Framework Agreement for the supply of domestic 240l wheeled bins of all colours circa periodically over the 4-year period in

accordance with Contract Procedure Rules, incorporating the relevant procurement legislation.

- Procure a multi supplier Framework Agreement for the supply of lower consumption plastic business waste bins, specialist sizes of domestic wheeled bins (only one or two known suppliers for the specialist plastic bins) and metal wheeled bin requirements (only two known UK suppliers) periodically over a 4-year term by way of mini competition or direct award in accordance with rule 4 of the CPRs or procure the supply of plastic sacks periodically in another way, subject to compliance with the CPRs.
- Procure a multi supplier Framework Agreement for the supply of plastic sacks periodically over a 4-year term by way of mini competition or direct award or by some other method in accordance with rule 4 of the CPRs or procure the supply of plastic sacks periodically in another way, subject to compliance with the CPRs.
- Seek an exemption to rule 4 of the CPRs in accordance with rule 21 of the CPRs (currently there is a sole supplier) and then seek approval to directly award a 4-year Framework Agreement under which the Council could periodically place orders for spherical bottomed wheeled bins and caddies, used for food waste collection and metal bin refurbishments with a single supplier.

Benefits

Confidence in completing a full, open market procurement. Unfortunately, it is more likely to increase costs and lead to significant demands upon officer time. Also, the Council would not benefit from economies of scale.

3.3 **Option 3**

- Agree a 4-year procurement strategy in consultation with the Commercial Procurement Unit. At the date of this report, it is anticipated that the strategy will be based on the below; however, the final strategy may vary from the following. The final strategy will be submitted for approval under a Delegated Decision Report:
  - Procure a single supplier Framework Agreement for the supply of domestic 240l wheeled bins of all colours circa periodically over the 4-year period in accordance with Contract Procedure Rules, incorporating the relevant procurement legislation.
  - Procure a single supplier Framework Agreement for the supply of lower consumption plastic business waste bins, specialist sizes of domestic wheeled bins (only one or two known suppliers for the specialist plastic bins) and metal wheeled bin requirements (only two known UK suppliers) periodically over a 4-year term by way of mini competition or direct award in accordance with rule 4 of the CPRs or procure the supply of plastic sacks periodically in another way, subject to compliance with the CPRs.
  - Procure a single supplier Framework Agreement for the supply of plastic sacks periodically over a 4-year term by way of mini competition or direct award or by some other method in accordance with rule 4 of the CPRs or procure the supply of plastic sacks periodically in another way, subject to compliance with the CPRs.
  - Seek an exemption to rule 4 of the CPRs in accordance with rule 21 of the CPRs (currently there is a sole supplier) and then seek approval to directly award a 4-year Framework Agreement under which the Council could periodically place orders for spherical bottomed wheeled bins and caddies, used for food waste collection and metal bin refurbishments with a single supplier.

Benefits
Confidence in completing a full, market procurement regularly. Unfortunately, it would be too administratively burdensome and still not achieve lean pricing or economies of scale. Also, if there are issues with product standards, the Council would not be able to look at other supplier appointed under the arrangements.

4 Preferred Option

4.1 Option 1 because it will allow for more frequent (circa 18 month) competitive pricing reviews between differing suppliers available under third-party Framework Agreements. Further each way forward under this option would be procurement compliant and enable effective pricing, service flexibility, reliable supply chain, effective decision scrutiny, without disproportionate officer time. Previous arrangements have led to large quantities of stock being ordered that have become damaged while stood in the yard due to the length of time before being required.

5 Consultation

5.1

6 Financial Implications

6.1 The proposal to change the procurement process for Waste collection receptables, which will include more frequent competitive pricing reviews as detailed within this report, is expected to have a favourable financial impact to the Service. There is a small possibility that fluctuations in material prices will produce an adverse swing, meaning a higher charge to the Service.

6.2 The table below shows the spend incurred for the purchase of receptacles over the last four years:

Year	**Spend £**
2021/22	280,531
2022/23	312,292
2023/24	187,174
2024/25 forecast	198,427
4 Year Total	**978,424**

6.3 The revised process will ensure the Authority will be charged a more competitive price per product more frequently compared to the current arrangement.

6.4 It should be noted, the introduction of a new charging policy from 1st April 2025 which will charge for recycling bins, is expected to reduce the amount of bins requested contribute an estimated £90k per annum.
(John Edisbury)

7 Legal Implications

Contract Procedure Rules

7.1 Rule 4 of the Contract Procedure Rules (CPRs) governs procurement procedures.

7.2 Rule 4.1 of the CPRs provides that *"Where an existing Contract, Framework or in-house service is available to meet the Council's specific procurement requirements and offers value for money it should be used unless there are particular circumstances which justify an alternative route to market"*. Accordingly, any proposals in the procurement strategy under Option 1 which rely on direct awards or mini competitions under third-party or Council Framework Agreements will be compliant with CPRs. The CPRs incorporate the requirement to comply with any governing legislation and any statutory guidance etc.

7.3 If the Framework Agreement is governed by the Public Contracts Regulations 2015 (for Framework Agreements tendered prior to 24 February 2025) or by the Procurement Act 2023 (for Framework Agreements tendered from 24 February 2025) all commissioning activity must be in accordance with the relevant Framework Agreement and the governing legislation.

7.4 By virtue of Rule 4.3, if the Council is managing its own procurement process:

(a) Where a contract has a value of £30,000 - £99,999, the relevant Service Area is required to contact the Commercial Procurement Unit who will conduct an appropriate procurement procedure in accordance with Rule 5.3 of the CPRs.

(b) If a Contract has a value of £100,000 up to the financial thresholds prescribed in regulation 5 of the Public Contracts Regulations 2015 (until 23 February 2024) and in the Procurement Act 2023 (from 24 February 2024) then the Service Area must contact the Commercial Procurement Unit who will conduct an appropriate procurement procedure in accordance with Rule 6.

7.5 As a result of the above, if any proposals in the procurement strategy under Option 1 rely on contractual arrangements put in place in accordance with CPRs alone, all commissioning activity must be in accordance with the terms of the relevant contracts and the rules under the CPRs.

Exemptions under the Contract Procedure Rules

7.6 Rule 21 of the CPRs governs exemptions to any of the rules under the CPRs only where the financial threshold of the proposed contract is below the relevant threshold under regulation 5 of the Public Contracts Regulations (prior to 24 February 2025) or the Procurement Act 2023 (from 24 February 2023). If a contract has a value in excess of the PCR threshold, rule 21 of the CPRs cannot be utilised. It is anticipated that any exemption proposals put forward under Option1 would be in respect of contracts with a value of no more than £100k over a 3 year period.

7.7 Rule 21 of the CPRs allows for an exemption to be approved in respect of any of the CPRs where there are "exceptional circumstances". In relation to Option 1, an exemption would be sought in respect of rule 4 (procurement procedures).

7.8 Only those officers listed in rule 21.4 of the CPRs are authorised to approve an exemption.

7.9 There are a number of circumstances listed under rule 21.3 of the CPRs that could amount to exceptional, including where there is a sole supplier, as is anticipated to apply under Option 1.

7.10 However, the list under rule 21.3 is not exhaustive and, therefore, the decision maker considering an exemption request is entitled to take into account any relevant circumstances which may amount to exceptional. The circumstances relied upon by the Service Area must be detailed within the request.

7.11 The decision maker determining an exemption request must consider the circumstances from an objective point of view and act reasonably. The decision maker should also take into account the comments made by the Commercial Procurement Unit.

7.12 Any action taken is auditable, so documenting the reasons for any decision made under rule 21 of the CPRs is advisable.

7.13 If a requested exemption to rule 4 of the CPRs is approved, the Service Area's usual decision maker would be in a position to make a decision on the recommendations detailed in the relevant Delegated Decision report provided that the decision maker consulted with those post holders referenced in the recommendations prior to reaching a decision.

Risks

7.14 It is not possible to eradicate the risk that any decisions taken by Cabinet in respect of this report or any decisions taken by those with delegated powers or powers under rule 21 of the CPRs in respect of Option 1 could be challenged by way of judicial review.

7.15 However, there are limited grounds for bringing such a claim; a decision made must be illegal (a decision-maker breaches a legal requirement, misdirects itself in law, exercises a power wrongly, or purports to exercise a power that it does not have, which is known as acting 'ultra vires') or it must be irrational (i.e., if it "is so unreasonable that no reasonable authority could ever have come to it") or if it is procedurally improper (a failure to observe statutory procedures or natural justice) or it is made in breach of legitimate expectation (when a public body has failed to act in line with an expectation that it has created by its own statements or acts).

7.16 Further, the claimant must have sufficient interest, or "standing" in the matter to which the judicial review relates (for example, a contractor who has not been given the opportunity to bid for the contracts). An application for permission to apply for judicial review in England must be made "promptly" and in any event not later than one month from the date when grounds for the application first arose (in procurement cases).

7.17 One or more of six forms of final relief are available, and all are at the discretion of the court. Declarations and quashing orders are by far the most granted remedies in judicial review. It is rare for the other remedies to be granted.

Sarah Orrell – Commercial & Procurement Solicitor

8 Procurement Implications

It is understood that the intention of this report is to mitigate future delays in seeking Cabinet approval for high expenditure where requirements may necessitate an urgent solution. As such, the strategy confirms that an appropriate procurement process will be duly conducted as required under Council CPRs and Regulations, as and when there is a requirement. The service area should continue to seek CPU support for all purchases over £30,000 including VAT, and depending on the appropriate sourcing solution, legal should be engaged to ensure robust terms and conditions are in place.

Jasmin Banks-Lee, Head of Commercial Procurement

13 Appendices

13.1 Appendix 1: Oldham Council Draft Waste Collection Receptacle Specification List.

Domestic Properties

Domestic Refuse - Body print standard Oldham Council Logo

Waste Stream & Type	Dimensions	Colour	Extras
Residual Plastic Sack	70l 400(Circa) x745x900mm 27Mu, Star-weld.	White tint with black print or Light Grey tint with Orange print. TBC.	Packed: 26 bags per roll, 4 rolls per pack. Refuse sack Print of use.
Residual Plastic Wheeled bin (small)	140l	RAL 7016	Refuse Lid Print of use. Hollow Axle. Maximum stack height 8.
Residual Plastic Wheeled bin (standard)	240l	RAL 7016	Refuse Lid Print of use. Hollow Axle. Maximum stack height 10.
Residual Plastic Wheeled bin (large)	360l	RAL 7016	Refuse Lid Print of use. 300mm Wheels. Solid Axle. Maximum stack height 8.
Residual Plastic Wheeled bin (large) Communal collection	360l	RAL 7016	Refuse Lid Print of use. 300mm Wheels. With triangular lock. VWS ENV0017 – 125KHz FDX tag. Solid Axle. Maximum stack height 8.
Residual Metal Euro bin (medium)	770 / 820l	Body Hot dip Galvanized finish or 'silver paint'. Duraflex **LID RAL 7015**.	Body sticker 'Household Rubbish Only'. Triangular Lock. VWS ENV0018H – 134.2KHz HDX tag for metal bins. Rodent Resistant drain plug. Plastic rim rear castors only.
Residual Metal Euro bin (large)	1100l	Body Hot dip Galvanized finish or 'silver paint'. Duraflex **LID RAL 7015**.	Body sticker 'Household Rubbish Only'. Triangular Lock. VWS ENV0018H – 134.2KHz HDX tag for metal bins. Rodent Resistant drain plug. Plastic rim rear castors only.
Residual (large) Communal Collection Point Spec	1100l	Body Hot dip Galvanized finish or 'silver paint'. Duraflex **LID Outer RAL 7015**, Lid in lid **BLACK**.	Standard Export Shell, Galvanised finish, Duraflex ROUND Lid in Lid (with T LOCK). Trailing Locking Castors fitted to the aperture side. Rodent Resistant drain plug. VWS ENV0018H – 134.2KHz HDX tag for metal bins. Body print 'Household Rubbish Only'. Plastic rim rear castors only.
Residual Metal Euro Paladin bin (large)	940l	Hot dip Galvanized finish	No Lid. VWS ENV0018H – 134.2KHz HDX tag for metal bins. Rodent Resistant drain plug. Plastic rim rear castors only.

Domestic Organic - Body print standard Oldham Council Logo

Waste Stream & Type	Dimensions	Colour	Extras
Organic Plastic Caddy	Circa 20l	RAL 6010 / **6011**	Hinged lid & pail handle, with comb lift compatibility. Organic Lid print of use.
Organic Plastic Wheeled bin (small)	140l	RAL 6010 / **6011**	Organic Lid print of use. Solid Axle. Maximum stack height 8.
Organic Plastic Wheeled bin (standard)	240l	RAL 6010 / **6011**	Organic Lid print of use. Solid Axle. Maximum stack height 10.
Organic Plastic Wheeled bin (Communal property FOOD only bin)	200l Spherical base bin.	RAL **6011**	Organic Lid print of use. Restrictive, lid in lid, with secure key gravity lock. VWS ENV0017 – 125KHz FDX tag.
Organic Plastic Euro bin (Communal property FOOD only bin)	500l	RAL 6010 / **6011**	Organic Lid print of use. Restrictive, lid in lid, with secure key gravity lock. VWS ENV0017 – 125KHz FDX tag.

Domestic Dry Mixed Recycling - Body print standard Oldham Council Logo

Waste Stream & Type	Dimensions	Colour	Extras
DMR Plastic Box / Caddy	50l	RAL 8024 / **8025**	Comb / lip lift, hinged lid & pail handle. DMR Lid print of use.
DMR Plastic Wheeled bin (small)	140l	RAL 8024 / **8025**	DMR Lid print of use. Solid Axle. Maximum stack height 8.
DMR Plastic Wheeled bin (standard)	240l	RAL 8024 / **8025**	DMR Lid print of use. Solid Axle. Maximum stack height 10.
DMR Plastic Wheeled bin (Communal small)	360l	RAL 8024 / **8025**	300mm Wheels, large mixed packaging bottle hole with brush, secure (DMR key) gravity lock. (*DMR Sticker of use*). VWS ENV0017 – 125KHz FDX tag. Solid Axle. Maximum stack height 8.
DMR Plastic Euro bin (Communal medium)	770l	RAL 8024 / **8025**	Large mixed packaging bottle hole with brush, secure (DMR key) gravity lock. (*DMR Sticker of use*). VWS ENV0017 – 125KHz FDX tag.
DMR Plastic Euro bin (Communal large)	1100l	RAL 8024 / **8025**	Large mixed packaging bottle hole with brush, secure (DMR key) gravity lock. (*DMR Sticker of use*). VWS ENV0017 – 125KHz FDX tag.
DMR Metal Euro bin (Communal medium)	770l	Body RAL 8024 / 8025. LID RAL 8016.	Standard Export Shell, Brown Duraflex REVERSE Lid, with CENTRAL DIVIDER and 'T' Lock. Trailing Locking Castors fitted to the aperture side. Secure lid hinge pin bolts. Rodent Resistant drain plug, DMR Sticker of use. VWS ENV0018H – 134.2KHz HDX tag for metal bins.
DMR Metal Euro bin (Communal large) Communal Collection Point Spec	1100l	Body RAL 8024 / 8025. LID RAL 8016.	Standard Export Shell, Brown Duraflex REVERSE Lid, with CENTRAL DIVIDER and 'T' Lock. Trailing Locking Castors fitted to the aperture side. Secure lid hinge pin bolts. Rodent Resistant drain plug, DMR Sticker of use. VWS ENV0018H – 134.2KHz HDX tag for metal bins.

Domestic Pulpable (mixed paper & Card) - Body print standard Oldham Council Logo

Waste Stream & Type	Dimensions	Colour	Extras
Pulpable Reusable Woven Sack	60l	RAL 5015	Weighted base, Velcro seal top, without flap.
Pulpable Plastic Wheeled bin (small)	140l	RAL 5015	Pulpable lid print of use. Solid Axle. Maximum stack height 8.
Pulpable Plastic Wheeled bin (standard)	240l	RAL 5015	Pulpable lid print of use. Solid Axle. Maximum stack height 10.
Pulpable Plastic Wheeled bin (Communal small)	360l	RAL 5015	300mm Wheels, paper / card slot with brush, secure (**DMR key**) gravity lock. (Pulpable sticker of use). VWS ENV0017 – 125KHz FDX tag. Solid Axle. Maximum stack height 8.
Pulpable Plastic Euro bin (Communal medium)	500l	RAL 5015	Paper / card slot with brush, secure (**DMR key**) gravity lock. (Pulpable sticker of use). VWS ENV0017 – 125KHz FDX tag.
Pulpable Plastic Euro bin (Communal medium)	770l	RAL 5015	Paper / card slot with brush, secure (**DMR key**) gravity lock. (Pulpable sticker of use). VWS ENV0017 – 125KHz FDX tag.
Pulpable Metal Euro bin (Communal medium)	770l	Body RAL 5015 **LID RAL 5015.**	Standard Export Shell, Blue Duraflex REVERSE Lid, with steel SLOT ONLY restrictor and 'T' Lock. Trailing Locking Castors fitted to the aperture side. Secure lid hinge pin bolts. Rodent Resistant drain plug, Pulpable Sticker of use. VWS ENV0018H – 134.2KHz HDX tag for metal bins.
